

AMIN

Amin Company is a reputable and active company in the production and supply of various types of medical alcohol and related products. Established with the aim of providing high-quality products and meeting market demands, especially in the healthcare sector, Amin Company has become one of the pioneers in the production of medical alcohol in the country. Relying on experience, technical knowledge, and commitment to quality, the company consistently strives to contribute to public health by offering top-quality products.

Medical alcohol, also known as ethanol or ethyl alcohol, is a chemical widely used in medicine and hygiene. It is typically produced in various concentrations (commonly 70% and 99%) and has disinfectant and antibacterial properties.

As its name suggests, medical alcohol serves as a cleaner and disinfectant, derived from sources like molasses, sugar beet pulp, barley, and wheat. After fermentation, the resulting substance contains about 15% alcohol, which is distilled to produce alcohol in various concentrations up to 99%. This product is then packaged and marketed in different forms according to customer needs and preferences.

Products and Services of Amin Company

Production of Various Medical Alcohols

Amin Company produces different types of medical alcohol in various concentrations and packaging formats. This includes ethanol alcohol (70% and 95%) and related products.

Disinfectants

The company also manufactures products such as hand and surface disinfectant solutions, used in hospitals, clinics, and public spaces.

Pharmaceutical Solutions

Medical alcohol is also used as a solvent in certain medications, which Amin Company supplies as well.

Applications of Medical Alcohol

- Disinfectant: Medical alcohol is a powerful disinfectant for surfaces, medical tools, and skin.
- Infection Prevention: Before injections or surgeries, the patient's skin is cleaned with medical alcohol to reduce the risk of infection.

- Pharmaceutical Solutions: Used as a solvent in some medications.
- Cooling: It can be used to cool the body in cases of fever.
- Cleaner: It is also useful for cleaning stains and grease from various surfaces.

Quality and Standards

International Standards

Amin Company adheres to both national and international standards in its product manufacturing. This includes compliance with GMP (Good Manufacturing Practice) principles and ISO standards.

Quality Control

Rigorous quality control processes are implemented at every stage of production to ensure the final products meet high safety and effectiveness standards.

Meeting Market Needs

Responding to Market Demands

Amin Company continuously assesses market needs and strives to meet customer demands by offering new and updated products.

Distribution

The company has an extensive distribution network, ensuring the availability of its products throughout the country.

After-Sales Service

Amin Company emphasizes effective after-sales service and values customer feedback and suggestions to improve its offerings.
